I am part of the Siemens ProductCERT / PSIRT team, working where vulnerability research meets product engineering: CNA and coordinated-disclosure operations for industrial and enterprise products, and the internal tooling our analysts rely on day to day. I came into security from development, so I tend to help fix the process as well as the finding. Good disclosure is never a solo effort — most of my work is coordination between researchers, product teams and partners. Alongside this I contribute to the team's conference monitoring service, co-lead OWASP Leiria, and research decentralised vulnerability reference databases for my MSc.

HOW I WORK

What I enjoy most is untangling a problem and leaving the process better than I found it — turning repetitive handling steps into tooling, and making the way a team works together measurably more efficient. That instinct is pulling me towards security management: I want to keep the technical judgement, and use it to shape how a team plans, prioritises and grows.

EXPERIENCE

2022 — present

Security Engineer

Siemens ProductCERT / PSIRT

- Part of the team handling CNA operations and coordinated vulnerability disclosure for industrial (OT/ICS) and enterprise products — CVE assignment, advisory work, and multi-party coordination with reporters, product teams and partners.
- Joined as a developer on the team's internal vulnerability-handling platform and still contribute the tooling and automation behind our intake and triage workflow.
- Contribute to the conference monitoring service: **22 security conferences covered** and **100+ stakeholders** in relationship across companies, research groups and communities, feeding research and trends back to the team.
- Vulnerability monitoring across third-party and open-source components, supporting product risk decisions with the product teams.

CVD CNA OT / ICS PSIRT Tooling Conference monitoring

08 — 12/2021
internship

Cyber Security R&D Intern

Dognaedis (Cipher) · Coimbra

Built a Django platform with user authentication, Celery async task processing, AI image analysis for phishing detection, and a DNS lookup pipeline.

2013 — 2022

Hospitality & production roles

Worked through my degree, mostly part-time and alongside study

Bartender & waiter — Grande Hotel de Luso, Curia Palace Hotel Golf & Spa, Caterfesta, Rodoviária pub & bar. Warehouse, expedition and production — Caves da Montanha, Anadia. High-pressure customer-facing work that taught me to stay calm and communicate clearly under load.

EDUCATION

- 2025 – present **MSc in Cybersecurity and Forensics**
Polytechnic of Leiria
Research: a decentralised vulnerability reference database on blockchain — distributing CVE-style records without a single point of trust or failure.
- 2016 – 2022 **BSc in Computer Science and Engineering**
Polytechnic of Guarda

SKILLS

Product security	CVD / CNA operations	OT / ICS security	CVSS & triage	Advisories & VEX		
	Vulnerability monitoring					
Engineering	Python & automation	Django	PostgreSQL	Docker	Git / GitHub	Celery
Familiar	AI / ML (Keras, Colab)	Blockchain / distributed ledgers		ASP.NET	SQL	Java

COMMUNITY & LEADERSHIP

- 2022 – present **Co-Lead — OWASP Leiria**
Driving cybersecurity forward in smaller regions of the country alongside my co-lead and a volunteer crew: attracting local talent, running chapter events, and collaborating with global speakers to bring international-level content outside the main cities.
- 2017 – 2021 **Student representation — Polytechnic of Guarda**
Degree Student Nucleus: President of the Fiscal Council (2020–21), Vice-President (2019–20), Director of Events (2018–19); Vogal, Computer Science Students Nucleus (2017–18); member of the CS & Engineering department, Academic Association of Guarda (2018–19).
- 2021 – present **Volunteer — Wildfire Watch**
Associação de Voluntários de Ferreiros — summer wildfire surveillance shifts.
- 2019 **Firefighter Robot Contest 2019**
Autonomous robot build and competition entry, Polytechnic Institute of Guarda.

PUBLICATIONS

- 07/2026 **Three Steps to the Terminal: A Siemens ROX II Zero-Day Trilogy**
Unit 42, Palo Alto Networks · co-author with E. Zhou, A. Robbie, R. Wyble
Joint Siemens ProductCERT / Unit 42 OT Threat Research analysis of three chained zero-days in Ruggedcom ROX II switches (CVE-2025-40947/40948/40949), covering the exploit chain and the coordinated disclosure behind advisories SSA-078743, SSA-081142 and SSA-973901.
- 08/2026 **Siemens sets standards: how data transforms cybersecurity**
Siemens Blog · contributor
On Supplier Authorized Data Publisher (SADP) and machine-readable vulnerability data: giving customers precise, vendor-sourced detail on which products an issue actually affects.
